

Re-Sizing an Image to 1600 x 1200 pixels

Many clubs and exhibitions require images to be presented at set sizes, 1600x1200 is a common size, here's how to re-size.

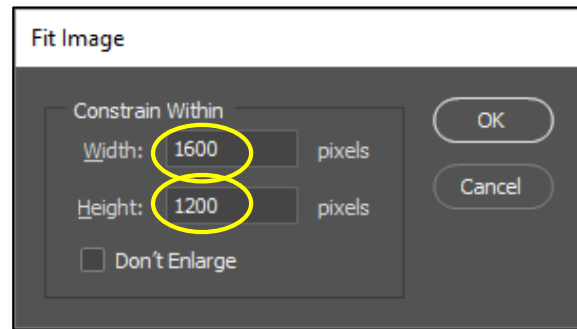

1

To re-size click on *File >> Automate >> Fit Image* as shown below.

2

Setting the dimensions to the above figures will ensure that your image will fit within 1600x1200 pixels regardless of it being in horizontal, vertical or square format. Click 'OK' to perform the action

Setting the dimensions in the box above limits the image to the dimensions entered. This will not affect the ratio of the image just the maximum size

3

Always use 'Save As' to save the new image, this will then not overwrite your original image file.
